

Lynck Solutions

Solutions Consultant

Job description

The consultant position is responsible for supply chain software implementations. The consultant will be working with various software platforms such as: JDA Warehouse Management (WMS), TraceLink, DM Logic's TRACE and WMS, and potentially more. This resource will assist customers by identifying and optimizing their preferred work methods and will work to coordinate implementations, developing of software modifications, reports and other tools to enhance their operations.

As an on-site representative you will work alongside clients to design solutions that efficiently satisfy business requirements, while balancing complexity to ensure processes are supportable and cost effective. Utilizing your knowledge and experience you will leverage standard functionality and minimize system changes, ensuring that enhancements are operationally and financially justified.

As a solutions consultant, you will also be required to write complex SQL queries and troubleshoot using development and vendor tools.

What You'll Do

- Assessing client business requirements
- Leading the design, configuration, and implementation of supply chain management systems
- Troubleshooting configuration and application issues
- Writing functional specifications for modifications, interfaces, reports, and label requirements
- Create, and/or review system and procedural documentation
- Analyze and optimize components of the solution to take advantage of best practices
- Work with all appropriate parties to effectively estimate project timelines and deliverables
- Recognize and highlight incremental improvement opportunities with existing clients
- Deliver technical solutions to warehouse/distribution center sites delivering various supply chain solutions
- Implement improvements in the technical aspects of the development process and environment
- Ensure the highest quality software is developed, tested, delivered and maintained
- Work with teams to develop interfaces to other software systems across the enterprise
- Participate or lead in analysis, testing and commissioning onsite

What You Bring

- 2+ years of general consulting experience
- 2+ years of JDA (RedPrairie) WMS in addition to DM Logic TRACE or TraceLink experience or some combination thereof
- Minimum of 3+ years of experience designing business software solutions
- Basic understanding of supply chain, logistics, and distribution functional concepts
- Strong communication skills, including the ability to present complex information to individuals and small groups
- Ability to travel to customer facilities

- Strong experience with software databases, data structures, and writing advanced SQL statements
- Experience creating high-level and low-level design specifications
- Experience leading acceptance testing
- Ability to solve complex problems and must be comfortable with a high level of ambiguity
- Ability to learn new technologies with limited guidance
- Bachelor's degree in Computer Science, Software Engineering, MIS, Supply Chain Management or related field
 - Experience with other JDA solutions such as Warehouse Labor Management (WLM), Integrator, Warehouse Management – Process,– Dispatcher, EMS, or Track & Trace
 - Experience reading MOCA trace files
 - Experience creating and maintaining custom control files and using mload utility
 - Experience with unit testing frameworks
 - Having strong customer-facing and team lead experience
-

Bonus Points For

- Experience creating legacy RPWriter reports
- Experience creating Jasper reports
- Experience creating labels
- Experience creating and maintaining custom DDAs
-
- Experience with other supply chain execution systems such as Manhattan Associates, HighJump, and SAP
- Experience with systems integrations
- Experience with agile development methodologies
- Experience with Systems Validation frameworks
- A strong business acumen
